EXPERIENCE

Montefiore Einstein, Workforce Solution Intelligence Developer | *Remote (USA)* July 2026 – Present

- Designed and delivered interactive Power BI dashboards for stakeholders and executives, translating billing, contractor, and operational data into KPI views that supported leadership reporting and data-driven decisions.
- Identified data anomalies in legacy Excel billing and operational sheets, and built conversational AI agents in Microsoft Copilot Studio, grounding them in a curated Excel-based knowledge base with structured field descriptions; validated agent responses from an end-user perspective and rolled them out to executives and key stakeholders to auto-generate KPI dashboards, Power BI reports, and visual artifacts on demand.
- Built an internal physician "session pay" application automating compensation for services rendered across departments, featuring a structured initiator/approver workflow with built-in validation checks and approval tracking, onboarded across 8+ departments and used by 50+ users.
- Engineered an automated Excel-to-Workday ingestion pipeline that parsed reconciled AI-generated artifacts and pushed records directly into Workday, eliminating manual data entry, cutting downstream processing time by 70%, and reducing data-entry errors across 20+ recurring pay cycles.

Mars Restoration, AI / Application Developer | *Remote (USA)* April 2026 – July 2026

- Built production Generative AI services in Python (FastAPI) powering an Anthropic Claude agentic assistant with 33 read/write tools, two-turn destructive-action confirmation, and cross-property scoping -- delivering an enterprise-grade conversational workflow across billing, contractor, and user domains.
- Engineered an end-to-end RAG pipeline with pgvector/HNSW vector search, Bedrock-titan embeddings, and multi-format document ingestion (PDF, HEIC, scanned docs via AWS Textract) over field-level-encrypted chunks -- grounding Claude responses in enterprise data with PII-masking.
- Drove prompt engineering and LLM optimization: structured system+tool prompts with prompt caching for a 90% input-token discount, cutting per-conversation cost 80% while holding sub-3s responses -- and built automated LLM eval/testing with 1,200+ tests across 83 suites.
- Deployed a polyglot 16-service backend on AWS ECS Fargate with service discovery, SNS/SQS queues, and X-Ray tracing; enforced AI governance & security via Cognito + JWT auth, RBAC, rate-limiting, and full audit logging across 50+ REST endpoints.

(Freelance), Backend Developer | *Remote (USA)* July 2025 – June 2026

- Designed and shipped real-time features -- travel posts, event timelines, and WebSocket live chat -- within a microservices architecture, with service discovery via Eureka for fault-tolerant horizontal scaling.
- Built an automated, event-driven notification service issuing pre-journey reminders, reducing missed trips by 10% and measurably lifting user engagement and retention.

SyncoreLabs, Full-Stack Developer | *Remote (India)* Jan 2025 – Mar 2025

- Designed and shipped real-time collaboration features -- including travel post creation/joining, interactive event timelines, and WebSocket-powered live chat with presence and typing indicators -- enabling instant, bidirectional updates and live location tracking across active trips.
- Architected the platform on a microservices architecture with service discovery and load balancing via Netflix Eureka, enabling fault-tolerant horizontal scaling, independent service deployment, and graceful failover under load.
- Engineered an automated, event-driven notification service that issues scheduled reminders 24 hours before each journey, reducing missed trips by 10% while measurably lifting user engagement, retention, and overall trip-completion rates.
- Built and secured RESTful APIs for core domains (users, posts, events, chat), integrating JWT-based authentication and role-based access to ensure safe, scalable client-server communication.

1Stop.ai / Raise Digital, Web Development Intern | *Remote (India)* Nov 2021 – Jan 2022

- Built a Single Page Application and full-featured E-Commerce platform in JavaScript, HTML, and CSS, applying OOP, functional, and imperative paradigms -- raising user-satisfaction scores 15% via a layout and navigation redesign.
- Collaborated across teams using Git version control, ensuring clean repository management and streamlined delivery.

PROJECTS

Full-Stack Student Survey Application | *Spring Boot, AWS, Docker, Rancher, Jenkins.* Nov 2024 – Dec 2024

- Built a full-stack application with a responsive Angular frontend and a Spring Boot backend using Spring Data JPA, connected via RESTful APIs.
- Containerized with Docker, deployed on Amazon EC2 (t2.large) with Jenkins-based CI/CD and Rancher for orchestration; achieved 99.99% uptime and scaled to support 200+ concurrent users.
- Integrated Amazon RDS for high-availability database storage and Amazon S3 for static content delivery, ensuring fast load times and multi-AZ data resilience.

EDUCATION

George Mason University, MS in Computer Science | *Virginia, USA GPA: 3.77 / 4.00* Aug 2023 - May 2025

SKILLS

Programming Languages: Python, C, C++, Java, JavaScript, HTML, CSS.
Frameworks & Libraries: Spring, Spring Boot, React.js, Node.js, Express.js, FastAPI, JUnit, Mockito, Zod, Prisma ORM.
Databases & Tools: PostgreSQL, MySQL, MongoDB, Redis, pgvector, Docker, Git, Postman, Kafka, Jenkins, Kubernetes.
Cloud & Services: AWS (EC2, S3, RDS, SNS, SQS, Bedrock, Cloud Map), Stripe, JWT (RS256), WebSockets, Eureka.
AI & Search: Anthropic Claude AI, RAG Pipeline, HNSW Embeddings, Semantic Search, Vector Databases.
Code Editors & OS: IntelliJ, VS Code, Eclipse IDE, Linux.

CERTIFICATIONS

- AWS Cloud Practitioner, Developer, Solution Architect Associate and DevOps Professional.
- Microsoft Technology Associate (core Java).
- NPTEL on Data Structures and Algorithms using Java.
- Hackerrank Java Programming and SQL Certifications.
